

At Flow-Eze Company our business is providing a complete solution for your pad printing, screen printing, hot stamping, and assembly needs.

3D Printing Specialists

Value Added Services

ASSEMBLY

In addition to our multitude of printing services, we recognize that keeping your project from moving from shop to shop is the best way to keep your costs down and ensure you can meet your timelines. We offer light-assembly, sorting, kitting, bagging, labeling, and heat-sealing.

WAREHOUSING

With over 40,000 square feet of manufacturing and warehouse space and with 14' clear vertical storage, we have the room for dozens of truckloads of product at any given time. Being centrally located in Rockford, Illinois we are close to major interstate, rail, and international air cargo hubs with customs processing. In addition to great storage and infrastructure, Flow-Eze is located in a United States Foreign Trade Zone, which means you can inventory your items at our location and have us imprint them with certain customs duties advantages.

History SINCE 1946

For nearly 70 years and three-generations the Flow-Eze Company has been providing quality decorating services to all industries. Founded by William and Alice McCarren, the company name was derived from the line of chemical products, including "Flow-Eze Drain Cleaner," with labeling laws rapidly changing the company imported it's first screen printing equipment to imprint previously lithographed cans with updated information. As word got out of the company's printing capabilities, Flow-Eze began imprinting packaging for other companies. Over half-a-century later the company's core business is printing; in contract services, as well as the company's other division including promotional products and bottles and containers for the janitorial market. Today, second and third generations continue to evolve the business with changing time, focusing on the customer and product quality as our number one priority.

3D Printing Specialists Since 1946

SCREEN PRINTING SERVICES

When one hears the technique of screen printing they instantly think of textile printing. While it is true that screen printing of textiles is one use of the process, countless other applications are perfectly suited for screen printing, albeit with some specialized equipment, knowledge, and experience. At Flow-Eze Company we specialize in non-textile screen printing services, such as flat screen printing, cylindrical screen printing, and high-speed cylindrical screen printing on all materials...from plastic, glass, metal, to paper, leather and composites.

PAD PRINTING SERVICES

For items that are extremely irregular in nature, flat or non flat surface, have a texture, or are in general a more "three dimensional" part, pad printing is an excellent choice; for imprinting a logo, warnings, or other information on a part. In addition to our expert team with decades of experience, we rely on only the finest, most precise machinery imported from Italy and Germany.

HOT STAMPING

For applications where it is desired to have 24 karat gold, silver, or other mirror like metallic finishes or opaque color, hot stamping is the best solution. Used frequently for cosmetic packaging, hot stamping is ideally suited for variety of other substrates including paper, leather, vinyl, and plastic.

INKJET MARKING

A new technology is on the horizon and gaining momentum...inkjet marking. Inkjet marking allows us to print relatively flat items quickly and efficiently, going from art to press in seconds. Additionally, inkjet marking allows for variable data printing, and the ability to nest multiple parts on the print bed. Inkjet is suited to substrates from wood, paper, glass, metal, to a variety of plastics.

Industries Served:

- Medical
